Elecbrakes flaw let anyone nearby brake your trailer. Update now

Published 20 November 2026. Read the full story, sources and any updates at digitaladvisors.com.au/journal/elecbrakes-trailer-brake-bluetooth-flaw/

- [ ] **Check your controller model.** Look for EB2, VM1 or ELBC 2000 on the brake controller fitted to your caravan, boat trailer, float or work trailer.
- [ ] **Check your remote first.** If it has no "V3" sticker and doesn't show "V3" on power-up, register for the free swap at remoteupgrade.elecbrakes.com. The update stops V2 remotes working.
- [ ] **Update the Elecbrakes app.** Get the latest version from the App Store or Google Play before you connect.
- [ ] **Install the firmware update.** Connect to your EB2 or VM1 in the app and follow the prompts. You want EB2 3.0.4.4.3 or VM1 1.3.4.2.1 or later.
- [ ] **Use the app until the new remote arrives.** The app keeps working after the update, including through Apple CarPlay and Android Auto.
- [ ] **Stay connected on an ELBC 2000.** Elecbrakes says keeping the app or remote connected while towing reduces the risk. Check the app for an ELBC 2000 update.
- [ ] **Update every trailer you manage.** If your business runs several trailers, each controller needs its own update.
- [ ] **Call Elecbrakes if you're stuck.** Its Australian support line is 1300 516 248, weekdays 8.30am to 4.30pm.
